

## TURNING THE TIDE:

### MEET THE LEADERS IN STROKE REVERSAL INNOVATIONS

#### *Shocking numbers – a huge challenge!*

- Six thousand (6.000) people are affected by lack of oxygen in the brain EVERY DAY.
- Forty percent (40%) of them die.
- Of those who survive, a half (50%) remain disabled forever.

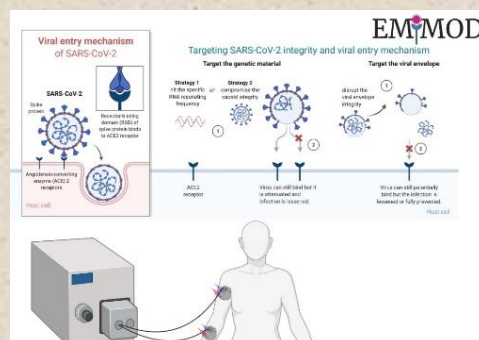

#### Do you know?

While therapy of heart infarction and cancer improved significantly over last decades, medicine is still almost completely powerless against the stroke.

#### MEET THE INNOVATORS:

Omnion Research International is the biomedical company focused on innovative solutions in early diagnostic and therapy of brain diseases. While their first worldwide recognized patent, based on personalized medicine approach is offering a significant improvement for brain health, their new product is even more astonishing: By applying a special type of electromagnetic fields, they influence inflammation in the brain, so it switches from destructive towards protective behavior. This can be applied both in antiviral applications (anti-Covid therapy), but also in reversing and immediate treating of the stroke.

*“We are witnessing a true revolution. What once was hidden within theoretical models, now is here, in front of us. Omnion is bringing the future. And there, with their solutions, stroke is a treatable condition.”*

*Elton Smith, MD, neurologist, stroke expert*
